

ListBox

- ▶ **ListBox is an offline schedule editor, providing sophisticated editing facilities such as text searching, clip copying/pasting, schedule printing, etc.**
- ▶ **It is the main tool for the Program Editors, enabling them to create and edit schedules many days and weeks in advance.**
- ▶ **No special server or hardware is required. ListBox runs flawlessly even on a notebook, even with software-based trimming and previewing.**

Sophisticated editing facilities

ListBox provides all necessary editing facilities for convenient playlist creation. You will find all expected features such as searching, cut/copy/paste, multi-selection editing, ordering facilities, playlist printing, and last but not least - multi-level undo/redo.

Last-minute clip editing

Simple clip editing tools are provided within the integrated clip trimmer. It allows discarding unnecessary footage, clip splitting, last-minute order reversal within the same clip. Forget about returning the clip back to the editing suite - no need and no time! You can even edit the on-air playlist, AirBox will automatically reload the new playlist on the next event.

Traffic system integration

ListBox imports traffic logs from third-party scheduling and traffic systems. This is achieved by using our universal tab-delimited and comma-separated values (CSV) and flat fixed-width text import engine.

Excellent price/performance ratio

ListBox does not require expensive hardware or ultra fast workstations, thus avoiding unnecessary expenses. All content previewing and editing is done by the software itself.

Intuitive operation

Add clips by just drag-n-dropping them from Windows Explorer or DataBox. Arrange their order by dragging them around. Separate program slots are colored in a different manner depending on logo presence or absence.

Straightforward, user-friendly interface

No need to learn from scratch. ListBox's user interface looks quite familiar as a standard Windows software. Most users start instantly working with it even without reading the User's Manual.

Playback Preview

Currently edited playlist can be played back on PC monitor for preview purposes

LISTBOX SPECIFICATIONS

Media File Formats

MPEG2	MPG or M2P - Program Streams M2T or TS - Transport Stream OpenDML AVI and WAV (mono and stereo) QuickTime, MXF, GXF
DV	OpenDML Type 1 and Type 2 AVI, QuickTime, Raw DV, MXF, GXF
